Magruder Construction Recognized By the US Army Corps of Engineers

October, 2018 (Eolia, Mo.) — Magruder Construction was appointed as the prime contractor for the Ted Shanks Habitat Rehabilitation and Enhancement Project. This initiative was part of the Corps of Engineers' Upper Mississippi River Restoration Program and encompasses approximately 2,900 acres that suffered degradation due to the 1993 flood and long-term sedimentation.

Located near the confluence of the Mississippi and Salt Rivers in Pike County, Missouri, and is managed by the Missouri Department of Conservation. It includes setback levees to reconnect areas with the floodplain, water control structures and drainage channels to manage water levels and improve drainage, pumping facilities for rapid water movement, and new plantings of native bottomland hardwoods.

About Magruder Construction Company — Magruder Construction Company is a highly experienced construction company offering heavy highway and dredging services throughout the Midwest. We got our start over 50 years ago doing earthwork and grading. Since that time we have been involved in bridge construction, dredging and the construction of levee and flood control structures. For more information on our scope of operation and to view completed projects, please visit our website at www.MagruderConstruction.com.
